10	Dahlia leaves	10	Peaches N Cream	Positive
11	Dahlia leaves	11	River's Dark Chocolate	Negative
12	Dahlia leaves	12	River's Rosie	Negative
13	Dahlia leaves	13	Sandia Isa A	Positive
14	Dahlia leaves	14	Skipley TNT A	Positive

Summary of Test Performance

Pathogen Tested	Test Method	Negative Controls	Positive Controls
DMV & DCMV	Isothermal Amplification	All Negative	All Positive

Explanation of Results and Methods

Tests described in this report are accredited under Agdia Incorporated's ISO/IEC 17025 accreditation issued by the ANSI National Accreditation Board unless noted otherwise. Refer to certificate and scope of accreditation L2424.

All test results produced from screening potato samples related to the production of minitubers are accredited under the USDA APHIS Minituber (*Solanum tuberosum*) Laboratory Testing Pilot program. Results produced from this testing may be used for the issuance of phytosanitary certificates. More information can be found on the Plant Health Export Accreditations and Certifications page of www.aphis.usda.gov.

The results described in this report are representative of the samples submitted for analysis. The degree of uncertainty in reporting is dependent on the condition in which the samples were received at the time of the testing request. All other factors contributing to the accuracy of diagnosis are controlled within the scope of the laboratory quality program. Sample identifications listed in this report, including plant species information, are recorded as supplied by the submitter. This report may not be reproduced except in full without written approval from Agdia, Inc.

Thank you for using Agdia Testing Services. Please contact us at 574-327-6071 or testing@agdia.com if you have any questions.
